# Moving your goods and platforms more efficiently.

## This is the Supply Change.™

### The opportunity:

Lowering your transportation costs isn't about reinventing the wheel. It's about doing the little things that can really add up.

You'll always have to incur the cost of delivering products to your customers. That will never change. But what if you could make smarter use of the space inside your trailers to carry a little more product with every load? And what if you made better use of your return trips, by eliminating a few empty lanes? Maybe even earn money on them?

And what if we transported your distribution platforms to and from your facilities for you? Our trucks are already on the road, so we can afford to deliver and collect partial loads any time and day. You save the costs of using your transportation, and you reduce the number of platforms you hold in your facilities, which also reduces your platform costs.

Our expertise and transportation resources can help you find and execute these small improvements that add up to big savings over time.

We will deliver and collect platforms within 48 hours of your order.

### What we do:

CHEP has the right Transportation Solutions to save you money and minimise the impact of your supply chain on the environment.

#### **Delivery & Collection**

We'll figure out how many distribution platforms you need, then we'll deliver them to your facility when you need them: so you can minimise your platform inventory and transportation costs. We'll also collect your platforms timeously, so you can further reduce costs and free space within your facilities.

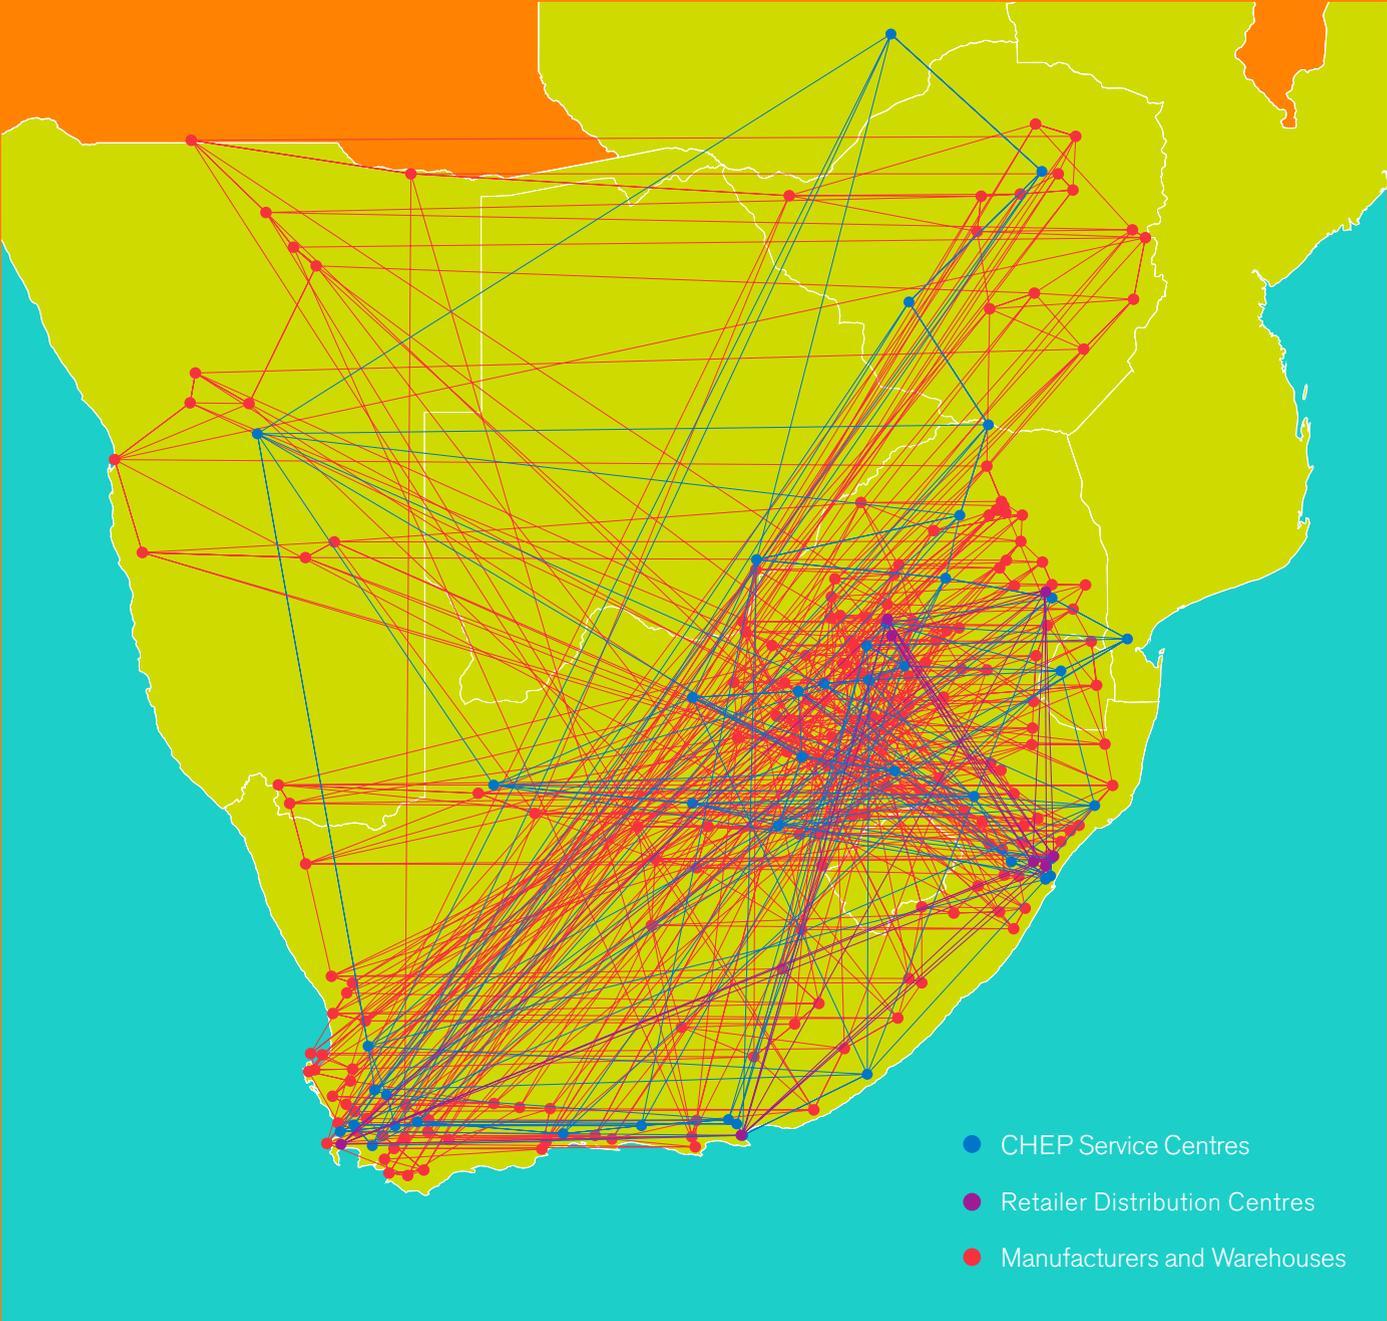

#### **Collaborative Transport**

We can turn your empty lanes into closed loops by matching your lanes with ours. Your empty lanes can help us balance our asset pools. Our empty lanes can help you transport goods. Together, we both eliminate costs and CO<sub>2</sub> emissions through more efficient use of our networks.

#### **Truck Load Optimisation**

Our logistics expertise helps you carry more product on every truckload. We'll use software modeling to determine the optimal configuration for your trailers, and then we'll conduct field tests to confirm these computer-generated recommendations. Optimised loads put fewer trucks on the road, which reduces your costs, fuel consumption and CO<sub>2</sub> emissions.

CHEP's network lowers your transportation costs throughout the South Africa region.

### How we'll work together:

We've got a wide-reaching network of lanes and resources that we can leverage to bring efficiencies to your operations. And we've got the experience and the know-how to make it all work together.

First, we'll study your existing transportation systems and platform delivery and collection practices to help you discover opportunities for improvement.

We'll look at your transportation network and ours to discover synergies that reduce empty lanes—both yours and ours.

We'll use software to analyse your trailer loads, suggest improvements to optimise them, and conduct field testing to make sure you're getting the most out of every delivery.

We'll also work with you to take costs out of your platform delivery and collection operations. You'll get the platforms you need, when you need them.

More efficiency. Less waste. Less impact on the environment. Together we can make it happen.

### Only CHEP:

With 15,000 customer locations across Sub-Saharan Africa and 30,000 deliveries per year, CHEP has the logistics resources, network and expertise to reduce your transportation and platform costs. We look forward to working with you.

### How you'll benefit:

We understand transportation logistics inside and out. Together we'll help you realise measurable improvements in your supply chain operations:

- + Elimination of empty miles and reduced CO<sub>2</sub> emissions
- + Reduced fuel consumption
- + Reduced carrier costs to receive or return distribution platforms
- + Increased product shipped per truckload
- + Reduced product damage during transport
- + Reduced platform inventory costs through just in-time delivery and collection of partial loads
- + Generation of direct revenue through backhaul freight opportunities
- + Leverage synergies to eliminate cross-border long-haul deliveries

### Global Good:

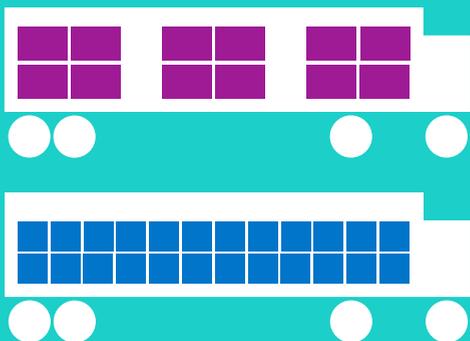

Every year we take 5,200 metric tons of CO<sub>2</sub> out of the atmosphere through collaborative transportation alone. It's all part of CHEP's Better Planet initiative, as we work to minimise the impact of the supply chain on the environment.

# Real-world ROI from Transportation Solutions

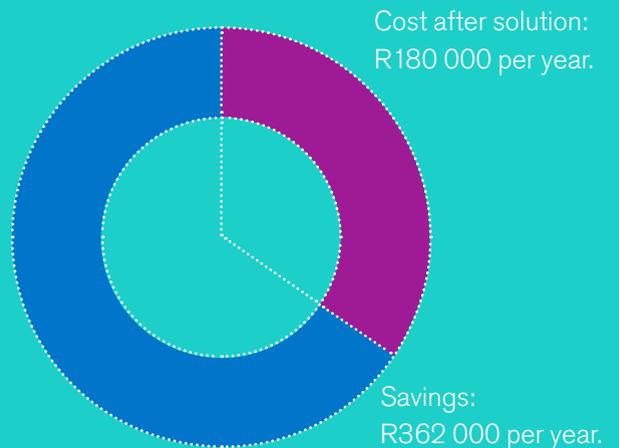

We showed a major U.S. food company how just-in-time platform delivery reduced their platform inventory by 30%.

We showed a major beverage supplier how truck load optimisation could reduce their total supply chain costs by 10%.

We helped a major manufacturer reduce its platform delivery costs by 67% through Collaborative Transport.
