

Getting more from every product load.

This is the Supply Change.™

The opportunity:

More efficiency. Less waste.

More speed. Less damage.

More product. Less resources.

More impact in-store. Less impact on the environment.

When you work with CHEP, you'll find we have what it takes to make all that happen for your business and your supply chain.

You'll have the distribution platforms, the quality, the supply and access to our broad array of supply chain solutions as well as our pragmatic, roll-up-your-sleeves know-how.

Everything you need to get more from your product loads.

To move them. Stack them. Store them. Ship them. Profit from them. Throughout your network and at retail.

Everything you need for a better supply chain. One in which you make more money on every product load. One in which you better serve the world.

A more efficient, profitable and sustainable product load. Together, we can make it happen.

Profit and Planet is no longer a compromise.

What we do:

Since we were founded more than 60 years ago, we've helped more companies move more goods, to more places, more efficiently and more sustainably than anyone else in the world.

We do it by enabling supply chains to share and reuse our platforms.

When our customers share and reuse platforms with others, the use of higher quality platforms becomes financially feasible. Higher quality platforms reduce product damage, increase product quality, carry more product per load, improve automated systems and reduce worker injury.

By sharing and reusing the same standardised platforms, all parties within the supply chain are enabled to standardise their operations, processes and equipment. This standardisation is the mother of supply chain efficiency.

Sharing and reusing platforms also enables our customers to reduce their platform inventories and the number of platforms they need to procure, manage and maintain. Less capital is expended. Less resources are consumed.

When you outsource your platform operation to us, we handle just about everything for you. No longer will you need to invest your capital to own your own platforms—or your energy and human resources to procure, transport, administer, repair and maintain your own proprietary platform pool.

Outsourcing your platform operations also eliminates your platform risks, by removing your exposure to market supply and price fluctuation and ensuring consistency of supply and quality.

Sharing and reusing CHEP platforms eliminates waste throughout supply chains and the world.

Pallets | Bins | RPCs | IBCs

The region's greatest supply of sustainable distribution platforms.

Standard Pallets

CHEP is the global leader in shared pallet solutions. With 45 Service Centres across South Africa and millions of wooden and plastic pallets in our pools, we have the consistent quality and supply to help you best move your products. CHEP developed and continues to drive pallet standards that connect players across the supply chain to maximise efficiency and safety. We are best positioned to supply your needs, ensure your operations keep moving, and get your goods to the right place at the right time in the right condition.

Display Units

Our half pallets, quarter pallets, dollies, bulk display units, merchandising trays, and any other display units help increase product sales through store merchandising and display, improved replenishment and reduced out-of-stocks. Fractional pallets also facilitate distribution of smaller loads to small store formats.

Owned Pallets

If you need standard or customised one-way wooden pallets for domestic use or export, we can provide them through our sister company, Weatherboard. In accordance with our commitment to the environment, we source our single-use pallets from our own sustainable tree farms.

Bins

Rigid bins from CHEP provide the ideal solution for transporting produce from field to packhouse, protecting fruits and vegetables from damage. Our foldable bins protect your produce from packhouse to retail.

RPCs

RPCs address the packaging, product quality and transportation requirements of many goods currently being transported via corrugated boxes and crates. They also help reduce waste to landfills and reduce transportation costs and CO₂ emissions.

IBCs

IBCs offer a cost-effective, environmentally sustainable way to transport food-grade liquids. With the widest range of containers in the industry, we'll collaborate with you to find the right platform for your needs.

How we'll work together:

As a company at the heart of more supply chains, we understand what makes them work. We know how to find efficiencies. We know how to root out waste. We know how to overcome obstacles and make things work.

We've taken this knowledge and created a suite of supply chain solutions to help you integrate best practices from around the world. So you can better construct and protect your product loads, handle them more efficiently, reduce damage to them, transport them at lower costs and export them to anywhere in the world.

We will partner with you in whatever capacity your business requires. For most customers, it usually works like this:

First, we'll map your entire supply chain to identify the best type and mix of platforms to satisfy your business and your customers.

Then, we'll design a platform delivery and service structure that reduces your platform management costs.

While we're putting these fundamentals in place, we'll discuss your supply chain goals, priorities, issues and opportunities to determine which of our supply chain solutions will bring you the greatest value.

What our customers achieve each year through the sharing and reuse of CHEP platforms:

1.38 million trees are left on the planet.

630 000 tonnes of CO₂ never enter the atmosphere.

3000 tonnes less of food is damaged during transport.

420 000 tonnes of waste never make it to landfills.

Electricity consumption per pallet reduced to .030 kWh from .038 kWh in South Africa.

13 tonnes of waste per month diverted from landfills in South Africa.

Global Good: For more than 60 years, CHEP has been a global leader in the sharing and reuse of resources to eliminate waste. Today in everything we do, we're focused on helping our customers develop and improve more efficient, safer and environmentally sustainable supply chains. It's all part of CHEP's Better Planet initiative, as we work to minimise the impact of the Supply Chain on the environment.

How you'll benefit:

The following will give you a good idea of the many ways our solutions can help improve your supply chain:

- + Reduce your supply chain's impact on the environment
- + Improve the quality of your delivered goods
- + Increase the amount of product you ship per product load and per truckload
- + Map and improve the flow of your goods, platforms and data upstream, in-stream and downstream
- + Reduce your platform inventory management costs
- + Improve your materials handling processes within your manufacturing and warehouse facilities
- + Increase the uptime of your automated and manual handling systems
- + Eliminate empty lanes and trips within your transportation network
- + Increase your in-store sales through improved merchandising and reduced out-of-stocks
- + Implement tracking technology systems to safeguard your high-value products and platforms
- + Free your people from all platform-related tasks and activities

Only CHEP:

No one has helped more companies move more goods to more places for more people than CHEP. Our engineers and experts have been at the heart of thousands of supply chains—collaborating with customers to streamline operations. Our unmatched portfolio of supply chain solutions can help you optimise every aspect of your operation. We look forward to collaborating with you to help you get more out of every product load.

CHEP sources all of the timber used to make its wooden pallets from sustainable tree farms.

Our foresters ensure that the timber we use for our pallets is replenishable and does not deplete resources.

CHEP owns several tree farms in South Africa. All of our farms are FSC® certified or working toward FSC® certification.

The mark of responsible forestry
