

GLC Cage

1200 x 1000 mm

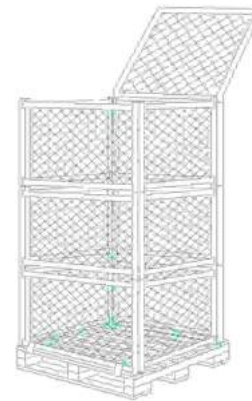

Overview

Pallet cages are designed to cater for items that are difficult to store and transport safely on pallets alone. The pallet cage is versatile and is used in a wide range of industries. It is ideal for a variety of goods including produce and individually packed consumer and industrial products.

The cage is a sturdy modular construction which allows the unit to be configured to various heights.

This makes the unit ideal for both distribution and short or long-term storage applications. For long-term hire applications the cages are able to be customised to individual requirements.

The cage is also available with a lid for added security and product protection.

Features and Benefits

Enhance efficiencies during storage and transport with consistent 4-way entry design ensuring compatibility with all standard equipment

Realise a fully flexible handling solution by forklift with cages constructed to fit standard pallet specifications

Protect goods from damage during warehousing, transportation and delivery through robust construction

Minimise health & safety risks to the workforce – cage sections are easily assembled and demounted

Reduce costs and save transport & warehousing space – CHEP cage sections are modular with a maximum assembled height of three modules. They can also be transported in their folded state

Specifications

Dimensions - in millimeters

	Length	Width	Height
External	1200	1000	560
Internal	1130	930	560

Nominal Capacity and Weight

Maximum capacity	570 ltrs	0.57 m ³
Tare Weight		22.6 kgs

The optional lid weighs 10 kgs

Configuration and Stacking

Cage sections attach to CHEP's internationally accepted standard pallet base. Cages can be assembled in one, two or three modules and stacked for maximum utilisation of space.

Notes

Materials

Steel.

Options and Accessories

Cage lid - CHEP Code 16515
