

Overview

The extensive usage of the CHEP Standard Plastic Pallet across a number of industry sectors provides for low cost and seamless unit load movements within and between customer supply chains.

For hygiene sensitive applications, plastic pallets are sometimes preferred over timber because of their non-porous surface, non-odour absorption, and because they are more easily cleaned.

Our hire pallet service also benefits customers because of our acceptance of responsibility for maintaining pallet quality standards, and our commitment to ensuring pallet stocks adequately meet customer needs.

Freed from concerns about these issues, customers can focus on their core business activities such as product manufacturing, transport, distribution and warehousing services.

Features and Benefits

- Four-way entry
- Durable plastic construction
- Hand holds
- Top-deck rubber friction plugs for a more stable load
- Angled chamfers on bottom deck
- Light-weight construction
- Repair and maintenance via CHEP's service centre network
- Pallet relocation managed by CHEP
- Rubber friction plugs improve load stability during transport due to gripping surface
- Washable and non-absorbent
- Efficiency of unit load movements within and between customers
- Compatibility with existing supply chain infrastructure – warehouses, racking, trucks, fork lifts, etc.
- No capital outlay
- Pallet durability and strength

Specifications

Dimensions - in millimeters

	Length	Width	Height
External	1219	1016	144

Nominal Capacity and Weight

Maximum load weight	1270 kgs
Tare Weight	26 kgs

Notes

Materials

HDPE High Density Polythene. Fibreglass Composite I-BRAM Reinforcement.
